Closing 2.0

The next step

Closing 2.0 is a simple name like an abbreviation evoking another simple concept, closing evolution.

After more than a century since the appearance of traditional headwork tap, Officine Lana has launched **Closing 2.0**, the new generation faucet headwork, on the market targeting the fussiest international customers, in particular satisfying American market demand.

While improving water flow regulation in terms of its proportional curve and less noise, the new **Closing 2.0** provides the same water flow as the traditional headwork mechanism.

Closing 2.0 fulfils the present REACH&ROHS and CPSIA compliance requirements regulating the release of lead from brass in drinking water.

Thanks to **Closing 2.0** the water flow comes in contact with a particular acetal resin used in both medical and food sectors.

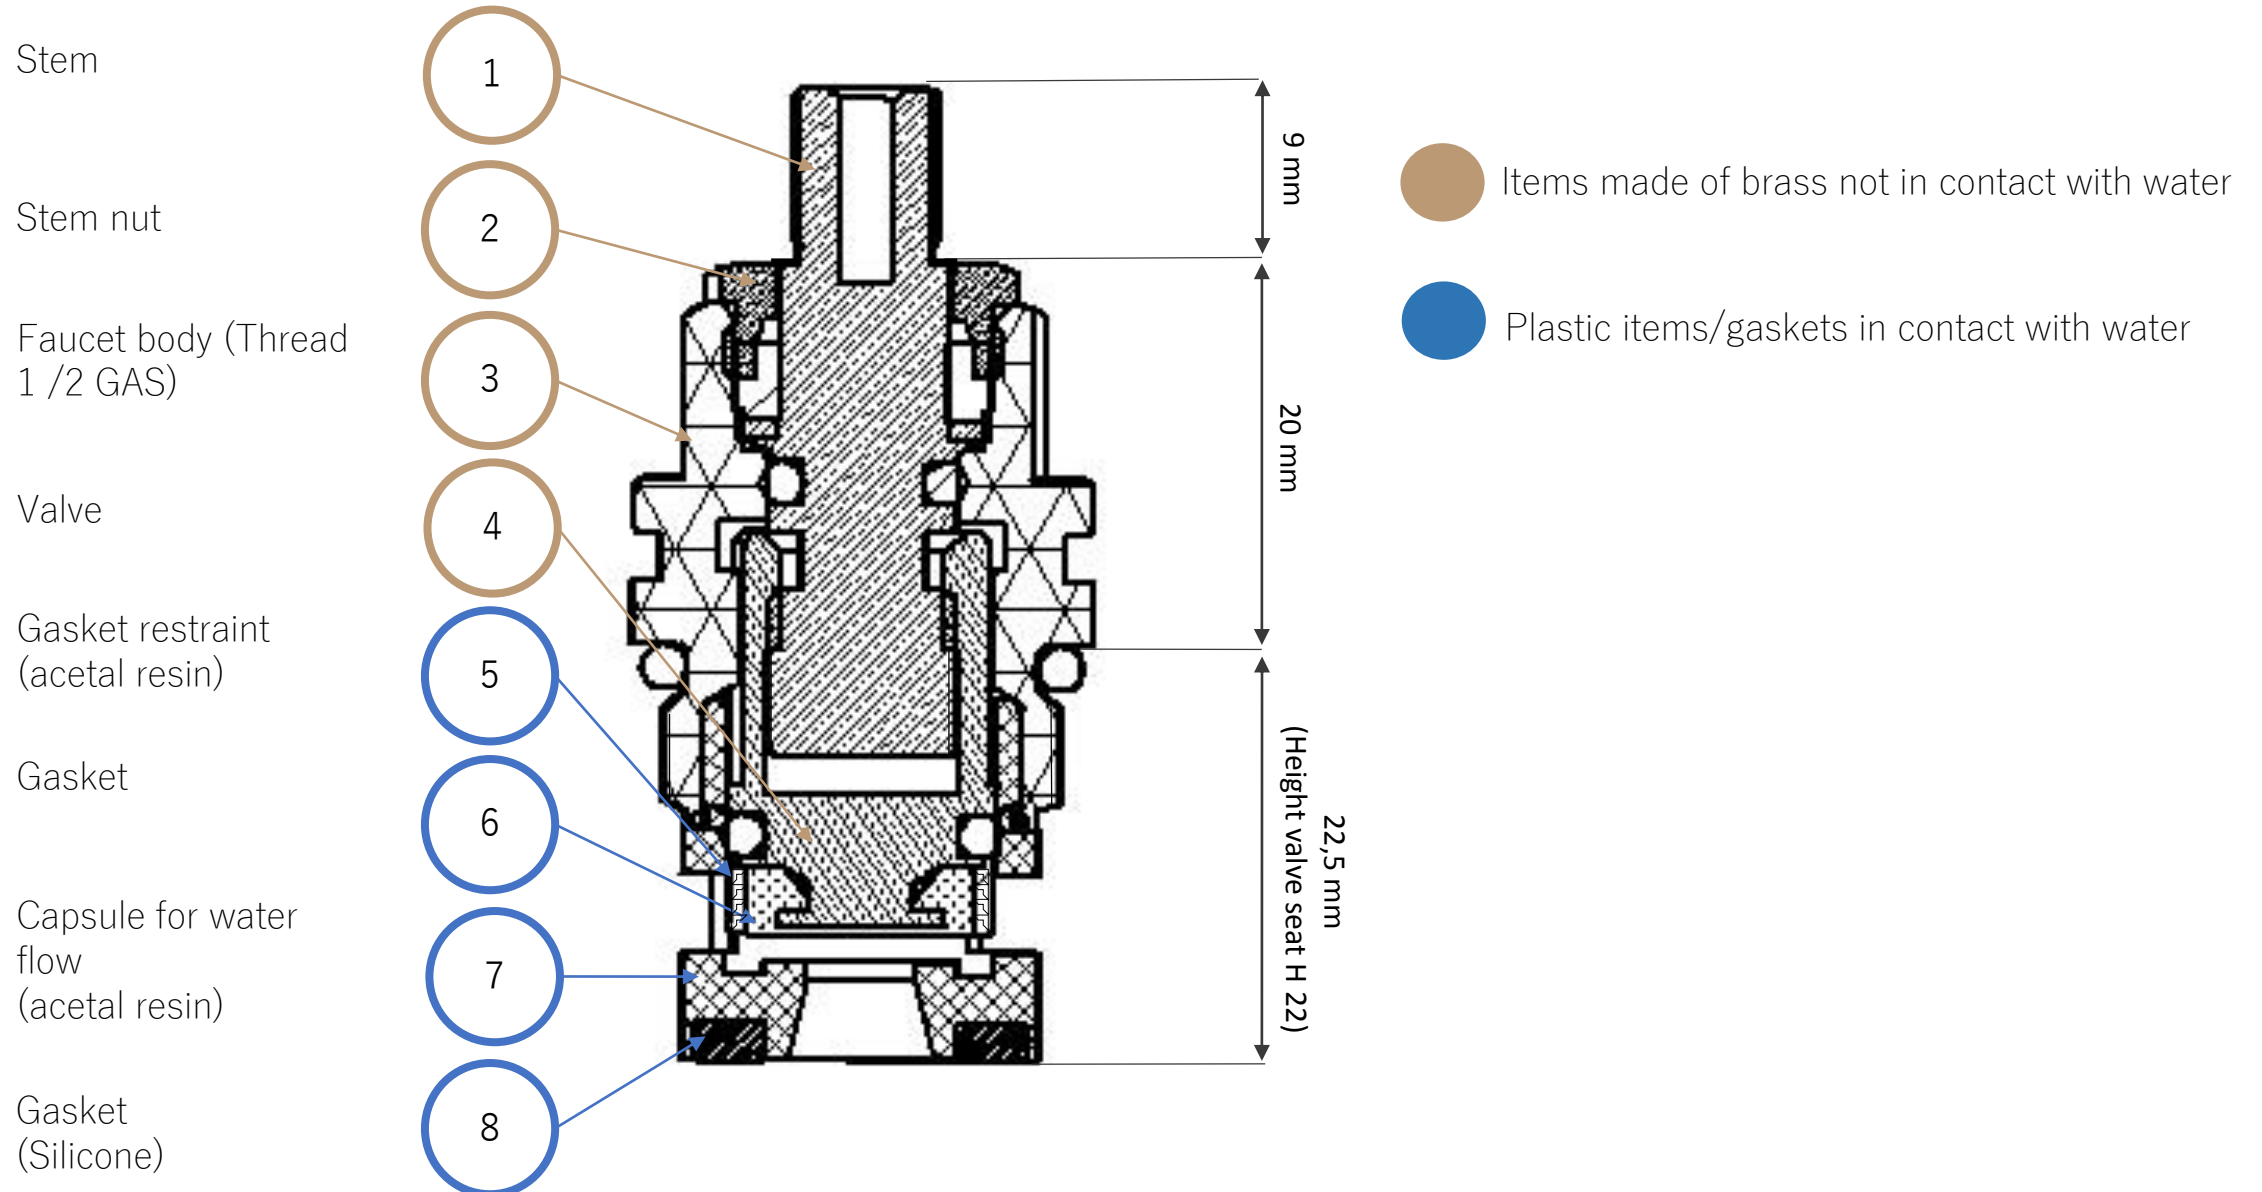

Closing 2.0

Technicalities and competitive advantages

- Noise and rustles decreased at any water flow regime
- Turning range 90° - 180° - 360°
- Decreasing in limestone creation and electrolysis
- Damping of hydraulic shock
- High ergonomics of flow regulation
- Proportional and high water flow
- Assembly locked with nut
- Items in touch with water are a gasket and items made of acetalic resin are hypoallergenic and totally food compatible
